## Search Notes

Dear Examiner GARG:

Attached please find the results of your search. Please feel free to contact me if you have additional questions or would like a re-focus search. Thank you and have a great day.

Paul

# EIC2100 COMMERCIAL DATABASE SEARCH REQUEST

☒ RUSH - SPE signature required: JEFFREY A. SMITH  
SUPERVISORY PATENT EXAMINER  
TECHNOLOGY CENTER 3600

Business Methods Case: 705/26-27 & 345/810,703/6,27;707/102,709/224 & 713/1

*Effective Filing Date: 02/7/2001*

Requester's Full Name: Yogesh Garg Examiner #: 78595 Date: 8/9/2007

Art Unit: 3625 Phone Number 571-272-6756 Serial Number: 10/071266

Bldg & Room #: KNX 5C09

Results Format Preferred: PAPER ☒ DISK ☐ E-MAIL ☐

If more than one search is submitted, please prioritize searches in order of need.

## Provide the PALM Bib page or the following:

Title of Invention: See Copy of Palm Bib Page, enclosed..

Inventors (provide full names): See Copy of Palm Bib Page, enclosed

Earliest Priority: 05/21/1999 60/135522

Filing Date 05/19/2000

## Requested attachments:

- If possible, provide the cover sheet, the IDS, examples, or relevant citations, authors, etc, if known.
- Please attach copies of the parts of this case that help explain or are most pertinent to this search. Examples are:
- Remarks filed on 7/30/2007 and claim 21 filed on 7/30/2007

**Copy of currently amended claim 21 is enclosed with relevant drawings.**

**CONSIDER CLAIM 21 which is** directed to a computer implemented intelligent catalog system for electronic creation, management and viewing of product information using a multimedia display system.

Concept and keyword strings are:

- (1) (database near10 storing (information or data) near10 (products or items or articles or components) near15 (object near5 model)) and ((parametric near2 objects) or (graphic near2 objects) or (document near2 objects)) and (business near2 rules near5 objects).
- (2) configuration business rules objects stored hierarchically :
  - (i) storing near5 (((sub near1 products) or (replacement near2 (part or product)) near10 (information or data);
  - (ii) storing product accessories;
  - (iii) (storing rules building product solutions) or (storing rules equivalence or substitution of products ).
- (3) database (meta near1 data), (dynamic reconfigure\$6) applications (new near1 product add\$3).
- (4) (Content near1 translator) converting unstructured content into structured content.
- (5) user applications configuring products each containing one or more sub-products without any custom reprogramming by storing the configuration business rules objects separate from application code of the user applications.

Questions about the scope or the results of the search? Contact *the EIC searcher* or contact:

Karen Lehman, EIC 3600 Team Leader  
KNX 4A58, 571-271-3496

## Voluntary Results Feedback Form

➤ I am an examiner in Workgroup:  Example: 3620 (optional)

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature  
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

Comments:

**Subject:** RE: Application No. 10/071,266, Filed February 7, 2002 (Our Docket Number: 3161.1000-001)

Thanks for your e-mail. Suggest following change:

including "executable" object model code on a computer readable medium.  
Adding "executable" does not change the subject matter. Hope it is acceptable. Pls. confirm.

Best regards

Yogesh Garg  
Primary Examiner AU3625

**Specification:** ...36 permits the transfer of applications and computerized tests to the test centers and examinee records and reporting information (data related to system errors and test/workstation security) from the test centers to the central... security data and reporting data). Reporting data is used to create the necessary reports. Program data such as examinee records, are processed to consolidate and reformat the information in a form suitable for postprocessing. The... inclusion in an exam. Associated with each item stored in the central item database is data stored in fields related to the item's answer key, revisions it has undergone, a list... central database software. Through a statistical feedback system, this statistical data is added to the data stored in the central item database.

New items may be written by test developers at the... be presented within a session script are: General information screen units, Tutorial units, Break units, Data collection units, Scoring and reporting units, and Testing units.

The session control information contains the default... should be understood that multiple procedures could be supported; the length of the break.

The data collection unit is used to obtain additional information from the examinee such as demographic or debriefing... of the testing unit, in which no scoring is done. Like the testing unit, a data collection unit references a test script, which controls the sequence and options of the unit... and moves to the next screen, data is written to an end item event log record. The data fields provided by a log record created upon the End Item event are shown in... numeric response. The "response data format" field 440 indicates which response data type the response data is stored in the log record. This field may also indicate that no response data was provided... an item has the second response data type then the examinee's entered response is stored in the "response data" field 444.

#### IV. The Test Administration System

##### A. Functional Overview

An administrative application and various... network environments, the workstations may have hard disk storage devices or be diskless workstations that store all information on the server. One station in each local area network center is designated the "master... presents the same test information to the examinee. If the examinee confirms that the information is correct, a record indicating that a test was administered is written to a security log file and

the...then the security log file may be considered corrupt. A checksum may be performed on the **data** in the log **record** as is well known and the result stored in the CHECKSUM field 2404. The name...reopened at 1206, the Examinee Confirmation screen may then be displayed at 1208 from the **information stored** in the Session file. In a preferred embodiment, the examinee is prompted to continue from...1. The NDDS 2002 further utilizes other information to process the input files 2001. This **information** is **stored** in NDDS files which may be categorized as either system files or application files. In...Event Log Database. The master record is written to the CBTN database and contains linking **information** to the other **records** in the database. The reconciliation record preferably contains system generated and administrator entered test administration...a different full name as an existing database record are preferably processed as separate examinee **records**.

## 8. CBTN Information Component

This component consists of an application for adding, updating and deleting the CBTN database...formatted screen such as that in Figure 100C will then be displayed. To display the **information** for any other **record** on the screen listed in Figure 101C, the cursor should be placed on the desired...

**Claims:** ...a plurality of predetermined events are monitored by said test delivery system, each event and **related information** being **stored** within a log record, a combination of log records created during the delivery of said...  
...delivery of said computerized test are monitored by said test delivery system, each event and **related information** being **stored** within a log record, a combination of said log records storing events related to errors...comprising the steps of:

preparing at least one of the following units:

(1) an examinee **data collection** unit having at least one inquiry to be presented to examinees to obtain information about... reporting of at least one computerized test; and

defining a sequence in which said examinee **data collection** units, scoring and reporting units testing units, GIS units, and tutorial units are to be ...

Results Format Preferred: PAPER ☒ DISK ☐ E-MAIL ☐

If more than one search is submitted, please prioritize searches in order of need.

Provide the PALM Bib page or the following:

Title of Invention: See Copy of Palm Bib Page, enclosed..

Inventors (provide full names): See Copy of Palm Bib Page, enclosed

Earliest Priority: 05/21/1999 60/135522

Filing Date 05/19/2000

Requested attachments:

- If possible, provide the cover sheet, the IDS, examples, or relevant citations, authors, etc, if known.
- Please attach copies of the parts of this case that help explain or are most pertinent to this search. Examples are:
- Remarks filed on 7/30/2007 and claim 21 filed on 7/30/2007
- 

**Copy of currently amended claim 21 is enclosed with relevant drawings.**

**CONSIDER CLAIM 21 which is** directed to a computer implemented intelligent catalog system for electronic creation, management and viewing of product information using a multimedia display system.

Concept and keyword strings are:

- (1) (database near10 storing (information or data) near10 (products or items or articles or components) near15 (object near5 model)) and ((parametric near2 objects) or (graphic near2 objects) or (document near2 objects)) and (business near2 rules near5 objects).
- (2) configuration business rules objects stored hierarchically :
  - (i) storing near5 (((sub near1 products) or (replacement near2 (part or product))) near10 (information or data);
  - (ii) storing product accessories;
  - (iii) (storing rules building product solutions) or (storing rules equivalence or substitution of products ).
- (3) database (meta near1 data), (dynamic reconfigure\$6) applications (new near1 product add\$3).
- (4) (Content near1 translator) converting unstructured content into structured content.
- (5) user applications configuring products each containing one or more sub-products without any custom reprogramming by storing the configuration business rules objects separate from application code of the user applications.

### PROPOSED EXAMINER'S AMENDMENT

1. 1-20. (Canceled)
21. (Examiner's Amendment) A computer implemented intelligent catalog system for electronic creation, management and viewing of product information using a multimedia display system comprising:
  - (a) a database repository storing information including executable object model code on a computer readable medium about products from one or more vendors, where the product information is stored according to an object model representing the product information, the object model including parametric objects, graphic objects, document objects, configuration business rules objects and procurement rule objects, where the object model handles ~~is capable of handling~~ an unrestricted number of objects for each product;
  - (b) the configuration business rules objects being stored according to a hierarchy by:
    - (i) storing information on sub-products that a product is comprised of, including storing product part replacement information;
    - (ii) storing product accessories that can be ~~capable of being~~ added to a product;
    - (iii) storing rules for building product solutions that incorporate product information stored in the database; or
    - (iv) storing rules for equivalence or substitution of products for use when building a product solution;
  - (c) the database using a meta data system describing the product information, the meta data system dynamically reconfiguring ~~capable of dynamic reconfiguration of~~ user applications when new product types are added to the database;
  - (d) ~~[[a]]~~ an executable content translator stored on a computer readable medium, in communication with the database, converting unstructured product content into structured product content based on the object model and the meta data system,

where the content translator indexes the structured product content in the database to create at least a portion of the product information;

(e) executable user applications stored on a computer readable medium, in communication with the database, using the object model and the meta data system, the user applications including a catalog application and a bill of materials application; and

(f) one or more of the user applications configuring and designing a product solution based on the configuration business rules objects, where the product solution being configured and designed includes one or more products each containing one or more sub-products, the architecture of the user applications enabling changes to be made to the configuration business rules objects without any custom reprogramming by storing the configuration business rules objects separate from application code of the user applications.

22. (Previously Presented) A computer implemented intelligent catalog system as in claim 21 wherein new configuration business rules are added without reprogramming the object model.

23-27 (Examiner's Amendment - Canceled)

28. (Previously Presented) A computer implemented intelligent catalog system as in Claim 21 wherein the one or more user applications are automatically adaptive to the dynamic reconfiguration of the product information.

29-44 (Examiner's Amendment - Canceled)

45. (Examiner's Amendment) A computer implemented intelligent catalog system for electronic creation, management and viewing of product information using a multimedia display system comprising:

(a) a database repository storing information including executable object model code on a computer readable medium about products from one or vendors, where the product information is stored according to an object model representing the product information, the object model including parametric objects, graphic objects, document

objects, configuration business rules objects and procurement rule objects, where the object model handles ~~is capable of handling~~ an unrestricted number of objects for each product;

(b) a generic scheme defining organization of the product information stored in the database, the scheme allows the addition of ~~being capable of adding~~ new products to the product information without any custom reprogramming, the scheme enabling data interchange and fast retrieval of the product information stored in the database;

(c) the configuration business rules objects being stored according to a hierarchy by:

(i) storing information on sub-products that a product is comprised of, including storing product part replacement information;

(ii) storing product accessories that can be ~~capable of being~~ added to a product;

(iii) storing rules for building product solutions that incorporate product information stored in the database; or

(iv) storing rules for equivalence or substitution of products for use when building a product solution;

(d) the database using a meta data system describing the product information, the meta data system dynamically reconfiguring ~~capable of dynamic reconfiguration of~~ user applications when new product types are added to the database;

(e) [[a]] an executable content translator stored on a computer readable medium, in communication with the database, converting unstructured product content into structured product content based on the object model and the meta data system, where the content translator indexes the structured product content in the database to create at least a portion of the product information;

(f) executable user applications stored on a computer readable medium, in communication with the database, using the object model and the meta data system, the user applications including a catalog application and a bill of materials application; and

(g) one or more of the user applications configuring and designing a product solution based on the configuration business rules objects, where the product solution being configured and designed includes one or more products each containing one or

more sub-products, where application code for the user applications is stored separate from the configuration business rules objects such that changes are capable of being made to the configuration business rules objects without having to perform custom reprogramming.
